

Pig ADG: 20 generations of phenotypic selection under SGE (Bijma model)

10 sires × 50 dams × 300 offspring/gen | 10 pigs/pen | $r(d,s)=-0.30$ | seed=20250520

A Phenotypic mean ± 1 SD

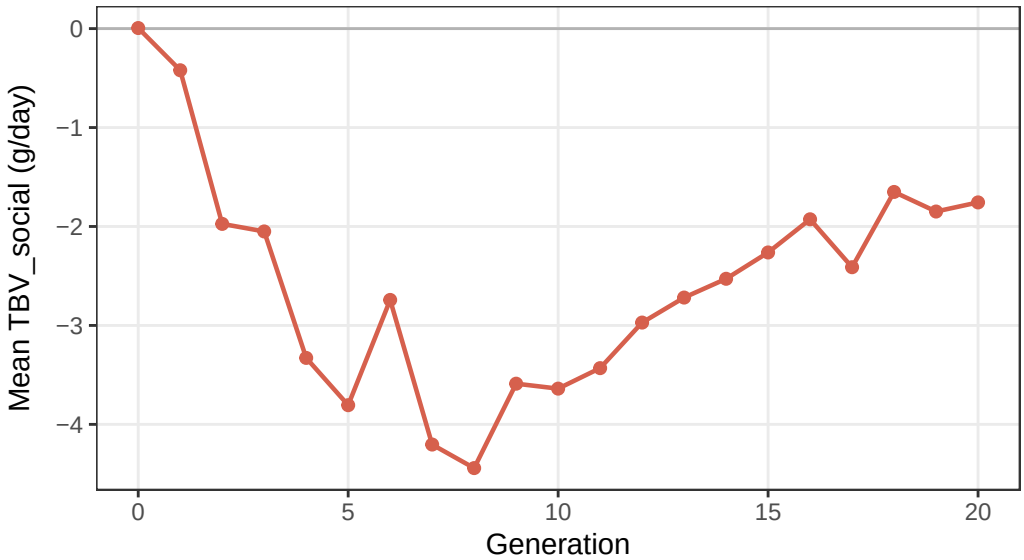

B Genetic trends (zero-centred at gen 0)

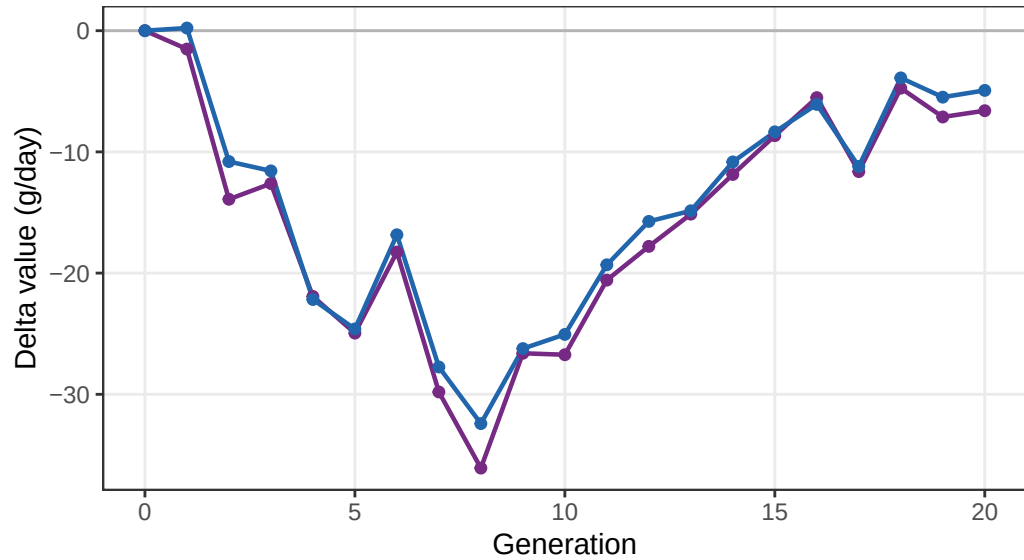

—●— $(n-1) \times \text{TBV social}$ —●— TBV direct —●— Total GV

C Mean TBV_social (raw) -- correlated response

D Phenotype vs Total GV -- social drag

—●— Mean phenotype —●— Total GV

$r(\text{direct}, \text{social}) = -0.30$; pen size $n = 10$

VA_direct=90 VA_social=15 VE=210 Vp=1317
Total GV = TBV_direct + $(n-1) \times \text{TBV_social}$
